PREFACE

This reference paper presents revised indexes of Real Domestic Product by industry of origin (including special component industry aggregates such as the Index of Industrial Production) on a 1961 weight and reference base, and incorporates the latest annual and quinquennial census levels, the final 1961 industry weights, revised seasonal adjustment, new monthly indicators and revised methodology.

The report updates the system of Real Domestic Product indexes published in Occasional Paper, Catalogue No. 61-506 and contains annual, quarterly and monthly tables, providing data for a wide range of industries and industry groups for the period from 1961 to 1969. Tables 2 and 3 feature the newly developed monthly Real Domestic Product indexes. Quarterly indexes continue to be included for the convenience of users.

The present report was prepared in the Industrial Output Section of the National Output and Productivity Division, Economic Accounts Branch, under the direction of Miss A. Ansmits, Acting Chief of the Section.

THE SYSTEM OF NATIONAL ACCOUNTS

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks, and descriptions of sources and methods) which make up this System will now carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data, (Catalogue Nos. with prefix 67), in their more summary form, are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Indexes of Real Domestic Product by Industry (included with Catalogue Nos. carrying the prefix 61) provide "constant dollar" measures of the contribution of each industry to gross domestic product at factor cost. Inputs and outputs are related in Productivity Studies (Catalogue Nos. with prefix 14).

Both the Input-Output Tables and Indexes of Real Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics, and the legal entity is the main unit of classification of transactors. Also, provision is made in the System for incorporation of balance sheet (wealth) estimates when such data are sufficiently developed.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, the Dominion Bureau of Statistics is continuing research on enterprise-company-establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in the United Nations publication, "A System of National Accounts" (Studies in Methods, Series F., No. 2, Rev. 3, Statistical Office, Department of Economic and Social Affairs, United Nations, New York, 1968). In the future, a document on the conceptual framework of the Canadian System of National Accounts will be prepared for publication by the Dominion Bureau of Statistics. This document will furnish the broad theoretical outline of the System. The finer conceptual details, the statistical tables, and the descriptions of sources and methods as they pertain to the individual parts of the System, will appear in the various regular and occasional publications relating to those parts.

NOTE RE HISTORICAL CONTINUITY

- 1. For a continuous record of the Index of Real Domestic Product and its components, the sources are as follows:
 - Indexes of Real Domestic Product by Industry (1961 Base), DBS Catalogue No. 61-506 The period from 1935 to 1960.
 - This publication Indexes of Real Domestic Product by Industry, 1961 1969, 1961 = 100 DBS Catalogue No. 61-510 The period from 1961 to 1969.
 - Index of Industrial Production (1961 = 100), DBS Catalogue No. 61-005 Current issues, for the period
 beginning January, 1970.
- 2. For a continuous record of the Index of Industrial Production and its components, the sources are as follows:
 - Indexes of Real Domestic Product by Industry (1961 Base) DBS Catalogue No. 61-506 The period from 1919 to 1960.
 - This publication Indexes of Real Domestic Product by Industry, 1961-69, 1961 = 100 DBS Catalogue No. 61-510 The period from 1961 to 1969.
 - Index of Industrial Production (1961 = 100) DBS Catalogue No. 61-005 Current issues, for the period beginning January, 1970.

CONCEPTS, SOURCES AND METHODS

DBS Catalogue No. 61-502 — See this publication for description of concepts, sources and methods for the Index of Industrial Production.

DBS Catalogue No. 61-505 — See this publication for description of concepts, sources and methods for Real Domestic Product by Industry of origin.

DBS Catalogue No. 61-506 — See this publication for technical notes concerning major changes in concepts, sources and methods in Real Domestic Product(including the Index of Industrial Production) resulting from the introduction of the 1960 Standard Industrial Classification and the adoption of the 1961 weight and reference base.

DBS Catalogue No. 61-510—See this publication for technical notes concerning major changes in concepts, sources and methods in Real Domestic Product (including the Index of Industrial Production) resulting from the introduction of the "total activity" concept, the adoption of the final 1961 weighting system, the incorporation of up-to-date census-based annual production levels and the introduction of revised methodology. The new monthly RDP indexes for the 1961-69 period are released here.

SYMBOLS AND CODES

The interpretation of the symbols used in the tables throughout this publication is as follows:

- .. figures not available.
- nil or zero.
- -- amount too small to be expressed.
- S.I.C. code: The Standard Industrial Classification code appearing in the tables should be interpreted as follows:
- An S.I.C. Division is indicated by one of the integers 1 to 11.
- An S.I.C. Major group within the Division is indicated by two digits following the Division code and separated from it by a colon.
- A 3- or 4- digit industry class is indicated by 3 or 4 digits respectively.

CONTENT OF SPECIAL INDUSTRY GROUPINGS

The industry content of these special groupings is defined as follows:

- Real Domestic Product less agriculture: All industries less agriculture (S.I.C. 2 to 11).
- Goods-producing industries: Agriculture (S.I.C. 1); forestry (S.I.C. 2), fishing and trapping (S.I.C. 3); mines (including milling), quarries and oil wells (S.I.C. 4); manufacturing (S.I.C. 5); construction (S.I.C. 6); and electric power, gas and water utilities (S.I.C. 7:04).
- Goods-producing industries less agriculture: The total of the previous grouping less agriculture (S.I.C. 2-6; 7:04).
- Service-producing industries: Transportation, storage and communication (S.I.C. 7:01-03); trade (S.I.C. 8); finance, insurance and real estate(S.I.C.9); community, business and personal service industries (S.I.C. 10); and public administration and defence (S.I.C. 11).
- Commercial industries: Agriculture (S.I.C. 1); forestry (S.I.C. 2); fishing and trapping (S.I.C. 3); mines (including milling), quarries and oil wells (S.I.C. 4); manufacturing (S.I.C. 5); construction (S.I.C. 6); transportation, storage and communication (S.I.C. 7:01-03) less highway and bridge maintenance (S.I.C. 516); electric power(S.I.C. 572); gas distribution(S.I.C. 574); trade (S.I.C. 8); finance, insurance and real estate (S.I.C. 9); offices of physicians (S.I.C. 823); offices of dentists (S.I.C. 825); other health services (S.I.C. 827); motion picture and recreational services (S.I.C. 10:04); services to business management (S.I.C. 10:05); personal services (S.I.C. 10:06) less private households (S.I.C. 873); miscellaneous services (S.I.C. 10:07).
- Commercial industries less agriculture: The total of the previous grouping less Agriculture (S.I.C. 2-6; part 7; 8; 9; part 10).
- Non-commercial industries: Highway and bridge maintenance (S.I.C. 516); water systems and other utilities (S.I.C. 576; 579); hospitals (S.I.C. 821); welfare organizations (S.I.C. 828); religious organizations (S.I.C. 831); private households (S.I.C. 873); education and related services (S.I.C. 10:01; and public administration and defence (S.I.C. 11).
- Index of Industrial Production: Mines (including milling), quarries and oil wells (S.I.C. 4); manufacturing (S.I.C. 5); and electric power, gas and water utilities (S.I.C. 7:04).

Note: Due to rounding, sub-annual detail may not average the annual level.

DESCRIPTION OF REVISIONS TO REAL DOMESTIC PRODUCT

This report presents revised estimates of Real Domestic Product (RDP) by industry for the 1961-69 period on an annual and sub-annual basis. The new monthly index of RDP (which includes the monthly Index of Industrial Production) is shown for the first time for the 1961-69 period. With the exception of changes indicated in this report, the concepts and general methodology remain as outlined in previous reference papers.1 The 1960 S.I.C.2 which was introduced in the last reference paper, continues to be used here.

The main features of the revision are: the adoption of revised 1961 industry weights, based on the final Gross Domestic Product at factor cost distribution; the incorporation into the system of improved and up-to-date annual index levels; improvements to the monthly indicators; extension of the total activity concept to manufacturing, mining and forestry, and the inclusion of depreciation estimates in the output measures for the non-commercial industries.

Aside from the revisions the single most important development featured in the report is the introduction of monthly indexes for Real Domestic Product (the Index of Industrial Production component is available on a monthly basis back to 1919) for the period 1961 - 69.3

Tables 1 to 4 of this report show the 1961based indexes for 1961-69 on an annual, monthly and quarterly basis. These revised indexes replace the previously-published record for the period beginning in 1961, contained in "Indexes of Real Domestic Product by Industry (1961 Base)'', DBS Catalogue No. 61-506 and in all issues of the monthly "Index of Industrial Production", DBS Catalogue No. 61-005 containing data to the end of 1969.

Revised monthly indexes for the year 1970 will be released in the December 1970 issue of the monthly publication (DBS Catalogue No. 61-005). The annual indexes contained in Table 1 will be revised for the most recent years and updated annually.

Table 5 of this report presents the final industrial distribution of Gross Domestic Product at factor cost for the year 1961, expressed in both dollar values and percentages. Table 6 shows annual average growth rates for major industry groups and aggregates for selected periods in the 1960's.

An updated description of concepts, methods and data sources for the Real Domestic Product system will be published in a separate reference document. No further major revisions to the RDP indexes are contemplated until conversion of the system to a new (1971) weight and reference base.

Revised 1961 Industry Weights

The 1961 industry weights used for purposes of the previously-published 1961-based indexes of Real Domestic Product by industry (DBS Catalogue Number 61-506), had to be estimated on a preliminary basis. The revised industrial distribution of Gross Domestic Product at factor cost presented in Table 5 incorporates the statistical and definitional changes available as a result of the completion of the historical revisions to the National Income and Expenditure Accounts and of the final 1961 Input-Output table. These final 1961 industry weights could be derived only after detailed reconciliation of all components of the System of National Accounts.

The revisions to the estimates of Gross Domestic Product at factor cost did not significantly alter the industrial distribution of GDP for 1961 at the industry division level. In most cases, the final percentage weights were within 2 per cent of the preliminary estimates. The largest change was in public administration and defence where a definitional change significantly affected the level of the estimate.

In the course of revising the preliminary GDP estimates, it continued to be necessary to draw upon a variety of data sources such as taxation records, company reports, and operating results surveys in order to estimate operating surplus of establishments. This approach is forced mainly because of the dearth of data on purchased service inputs on an establishment basis. It should also be repeated that, at the 4-digit S.I.C. industry level, it was frequently necessary to distribute GDP on the basis of the census value added.

The conceptual changes introduced and described in Reference Paper 61-506 (containing the preliminary estimates of GDP for 1961) have been modified by the following changes:

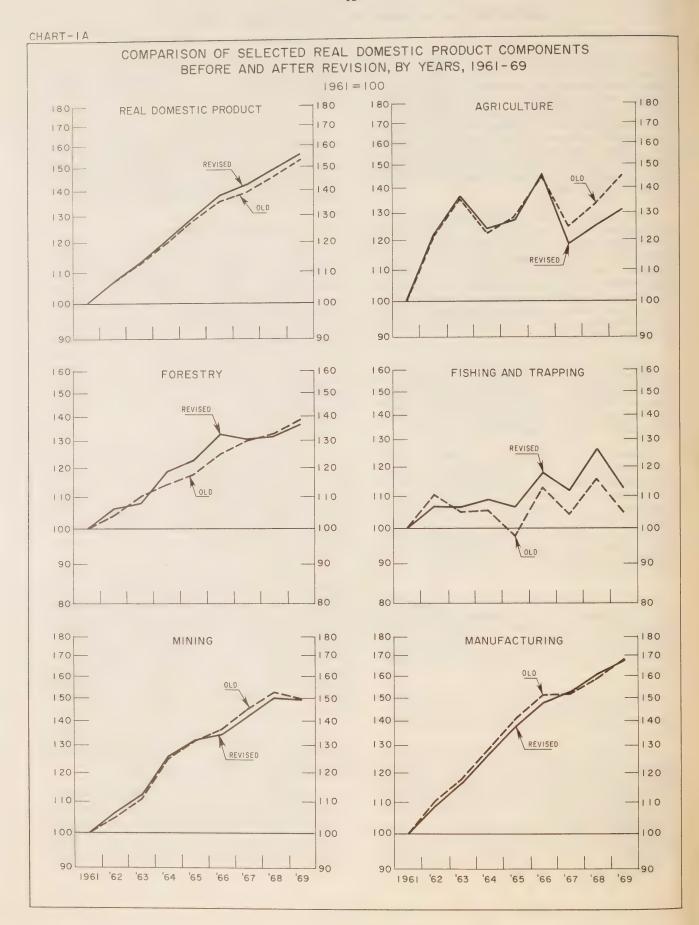

1. In conformity with the conceptual treatment suggested by the United Nations System of National Accounts, the definition of government gross fixed capital formation now excludes defence outlays. All defence outlays on fixed assets are now charged to government current

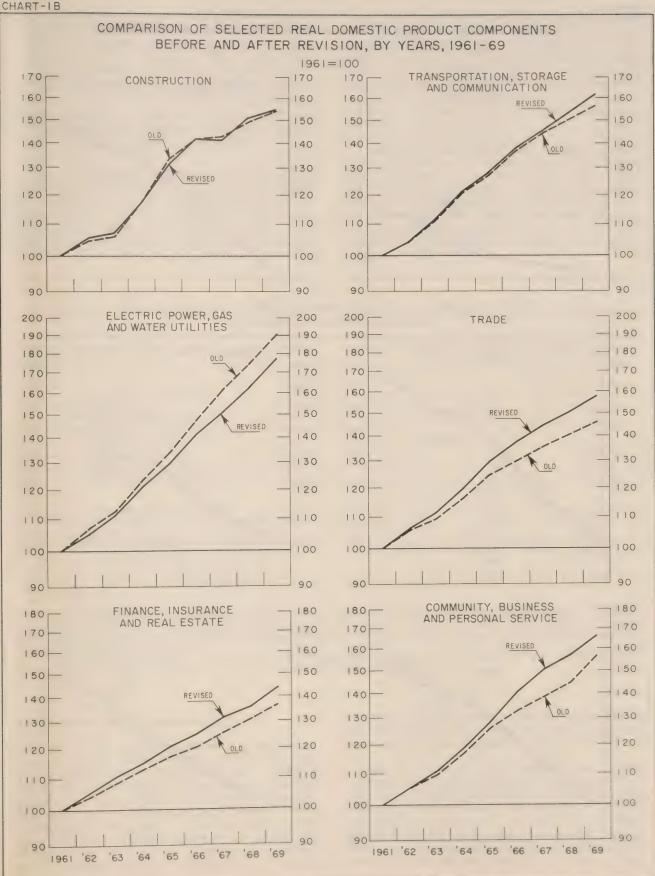

^{1 &}quot;Indexes of Real Domestic Product by Industry (1961 Base)"; DBS Catalogue No. 61-506, "Indexes of Real Domestic Product by Industry of Origin, 1935-61", DBS Catalogue No. 61-505 and "Revised Index of Industrial Production, 1935-57", DBS Catalogue No. 61-502.

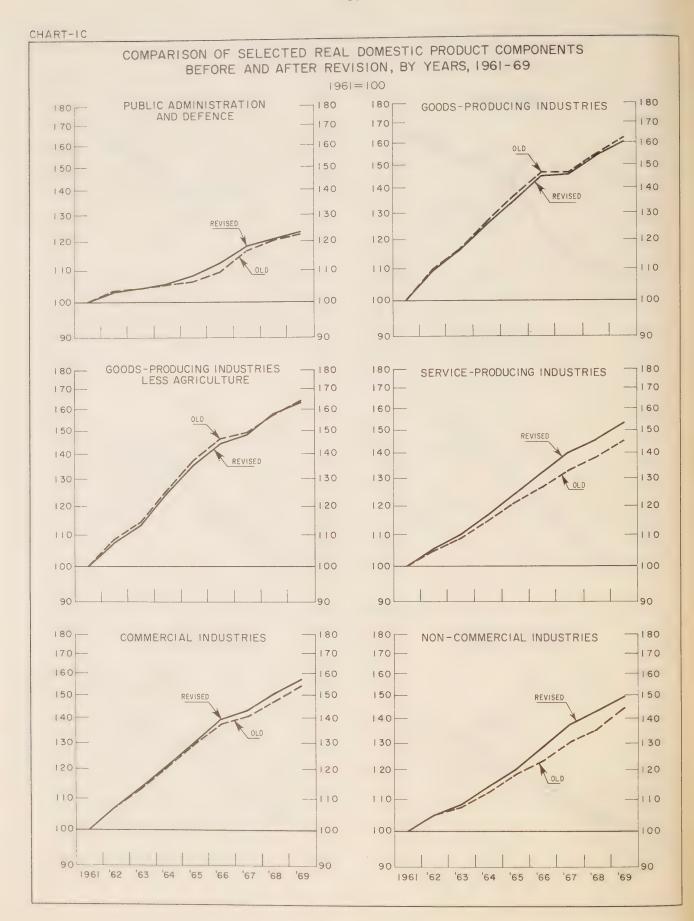

2 "Standard Industrial Classification Manual",

DBS Catalogue No. 12-501.

³ Monthly indexes for 1969 and 1970 were first released in the April 1970 issue of the monthly publication "Index of Industrial Production", DBS Catalogue No. 61-005.

expenditures on goods and services in the Canadian System of National Accounts, and hence depreciation on these assets is no longer included in the estimate. This definitional change is largely responsible for the reduced weight of the federal administration industry when compared with the preliminary estimate.

2. Some further changes to the miscellaneous valuation adjustments were incorporated in the final estimates of the industry weights.

A major statistical change affecting nearly all industries was the upward revision in wages and salaries. The new estimates were the product of a comparison of existing DBS and DNR labour income series with a tabulation of wages and salaries prepared by the Department of National Revenue at the time of the introduction of the

Canada Pension Plan. The DNR study was based on employers' records of employees' earnings as reported on the "T4" form, which indicated some undercoverage in the Bureau's estimates of certain components of labour income such as taxable allowances and executive salaries and wages. In addition, it was possible to correct for undercoverage of the universe in a few industries, such as trade.

Statistical revisions to the operating surplus were partly the result of refinements of the preliminary estimates in the light of special studies carried out for the final Input-Output Tables. Other changes reflect revisions to source data, such as the upward adjustment made to the trade estimates to compensate for undercoverage in the 1961 census, or the incorporation of new data sources as these became available.

Comparison of the Industrial Distribution of Gross Domestic Product at Factor Cost for 1949 and 1961¹

¹ Conceptual differences exist between 1949 and 1961 estimates for individual industries; hence they are not strictly comparable. These conceptual differences have been explained in the DBS occasional paper ''Indexes of Real Domestic Product by Industry(1961 Base)''(DBS Catalogue No.61-506) and apply particularly to finance, insurance and real estate, and public administration and defence.

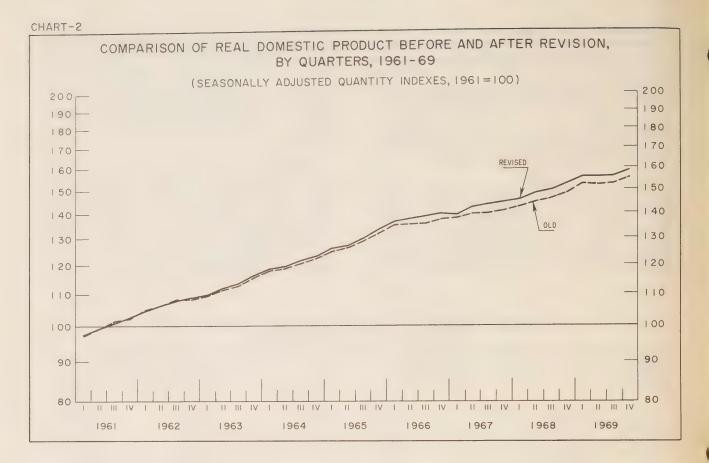

With the implementation of the 1960 S.I.C, the "other goods industries, n.e.c." group has been discontinued and its three components are being measured under the appropriate S.I.C. groupings.

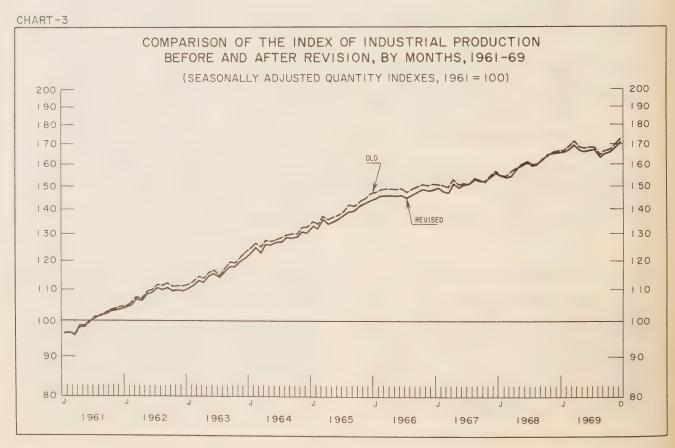

Real Domestic Product Measures, 1961-69

The annual industry indexes for the 1960's shown in Table 1 are based entirely on final census or annual survey data for the 1961-67 period and partly on preliminary annual data for the last two years. It is important to note that the previously-published annual indexes were based on preliminary information for this period. Thus the entire period is affected by statistical changes due to the incorporation of final annual measures. The extent of the revision varies from industry to industry

and from year to year but almost all industries are affected to some extent, with revisions in trade and manufacturing being among the more significant.

In the goods-producing industry area a conceptually important change was the inclusion of all activities of establishments into the output measures for manufacturing, mining and forestry which had previously been measured on a main activity basis. At least within manufacturing, this had a positive effect on the measures in the post-1966 period, resulting in an upward revision as of 1967 in such

industries as transportation equipment and metal fabricating. A number of improvements in methodology were also incorporated. One example is the more widespread use of industry selling price indexes in the deflation of current price values. This was made possible as a result of the improvements, extensions in coverage, rebasing to 1961, and conversion to the 1960 S.I.C. of the I.S.P.I. system which was recently completed by the Prices Division of DBS. Another example of methodological improvements is the development of net output indicators for many of the industries for which a gross output or materials used indicator had previously been employed. The following table gives an indication of the extent of these changes in manufacturing:

Percentage Distribution of 1961 GDP in Manufacturing by Type of Indicator

	Perc	entage
	Old	Revised
All types of indicator Net Gross Materials Labour	100.0 56.6 34.5 4.7 4.2	100.0 81.0 13.6 3.0 2.4

The annual output indexes for forestry and electric utilities have also been converted to a net basis, which accounts for the major part of the change in level in the electric utilities industry. In forestry another important development was the conversion of the annual survey, commencing in 1963, from an activity basis to an industry (establishment) basis.

In the service-producing industry area, the most significant conceptual change was the incorporation of depreciation estimates in the annual output measures for the non-commercial industries. The year-to-year changes in output for these industries had hitherto been measured by deflated salaries and wages alone, although depreciation estimates were already included in the preliminary 1961 GDP weights. The final 1961 industry weighting system includes revised depreciation estimates for these industries.

The major statistical change in the service industry area consists of the incorporation of 1966 census levels for trade and many of the component industries of the community, business and personal services group. The trends indicated by a comparison of the 1961 and 1966 census results for these industries were superimposed on the existing annual indicators, yielding substantially altered output levels for some industries, such as wholesale trade. The next most extensive revisions in source data were made in the industries using labour income as an indicator. The changes in the salary and wage data affected the entire period and were particularly important in finance, insurance and real estate and in some of the personal service

industries. In addition to the above changes, some methodology improvements were made, new deflators were developed for a few industries (local administration, advertising) and different indicators incorporated in a few cases where new surveys were introduced during the period, or existing surveys were discontinued.

The net effect of all the changes in the annual measures was to raise the level of the total Real Domestic Product index, increasing the average rate of growth from 5.4 to 5.8 per cent per annum over the period.

The following is a breakdown, by major type of indicator, of the total RDP system:

Percentage Distribution of 1961 GDP in Goods and Services by Type of Indicator

	Percentag GDP rep	
	Old	Revised
All types of indicator Net	100.0 25.4 50.6 1.2 22.8	100.0 32.8 44.2 0.7 22.3

Monthly measures for the entire Real Domestic Product system for the 1960's are presented for the first time in Tables 2 and 3 of this report. Users will recall that monthly RDP indexes, commencing with the January 1969 data, were first released in the April 1970 issue of the monthly Index of Industrial Production publication (DBS Catalogue No. 61-005) and the Annual Supplement. The present report extends the monthly measures back to January 1961 while at the same time incorporating revisions to the sub-annual record for the entire 1961-69 period.

Revisions to the monthly Real Domestic Product system, including the Index of Industrial Production, consist largely of the incorporation of up-to-date annual benchmark levels, some revisions of basic data and revisions of the seasonal adjustment factors. In addition, a number of improvements in statistical methods were adopted, such as the use of the trading day (calendar variation) adjustment routine available as part of the X-11 variant of the U.S. Census Method II seasonal adjustment programme. This routine rate-adjusts time series on the basis of internal evidence within the data and was found to be particularly useful in the case of the trade series. Finally, changes in the monthly indicators were introduced for several industries. For example, for the veneer and plywood industry

⁴ It should be noted that because of rounding and the trading day adjustment, the average of the monthly series may not equal the annual level.

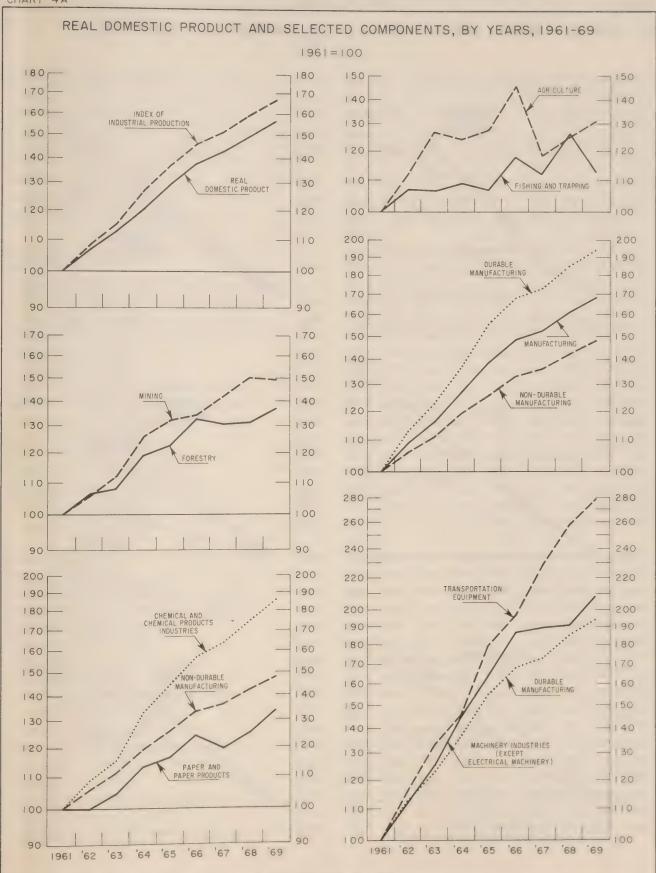

an output measure was developed to replace the previous measure based on peeler log consumption. The next most significant change within manufacturing was the improvement in the base year unit value commodity weights for the smelting and refining industry.

Within the other components of RDP, the two most noteworthy changes in monthly indicators occurred in construction and in education and related services. In the case of construction, a monthly series for residential construction was adopted, based on an improved method for estimating the volume of work put in place. In the case of education, monthly employment data, adjusted to annual benchmark levels, were used instead of a straight line interpolation between annual levels. Other changes include a wider selection of commodities in fishing and a revision in commodity weights in railway transport.

Classification Change

Users should note that there has been a change in the composition of the non-commercial and commercial industry groupings. The miscellaneous services group (S.I.C. 891-899), is now included in the "commercial industries" grouping, whereas in previous publications it was designated as noncommercial and included in the "non-commercial industry" grouping. The change does not constitute a significant break in comparability in the commercial industry aggregate so that the indexes for the 1935-60 period published in DBS Catalogue No. 61-506 constitute a continuous series with the 1961-69 indexes contained in this report. The present change was implemented because of the substantial growth during the 1960's of the commercial industry content of this group and to facilitate comparison with other statistical series, such as employment.

 $^{^{\}rm 5}$ For content of special industry groupings see page 7.

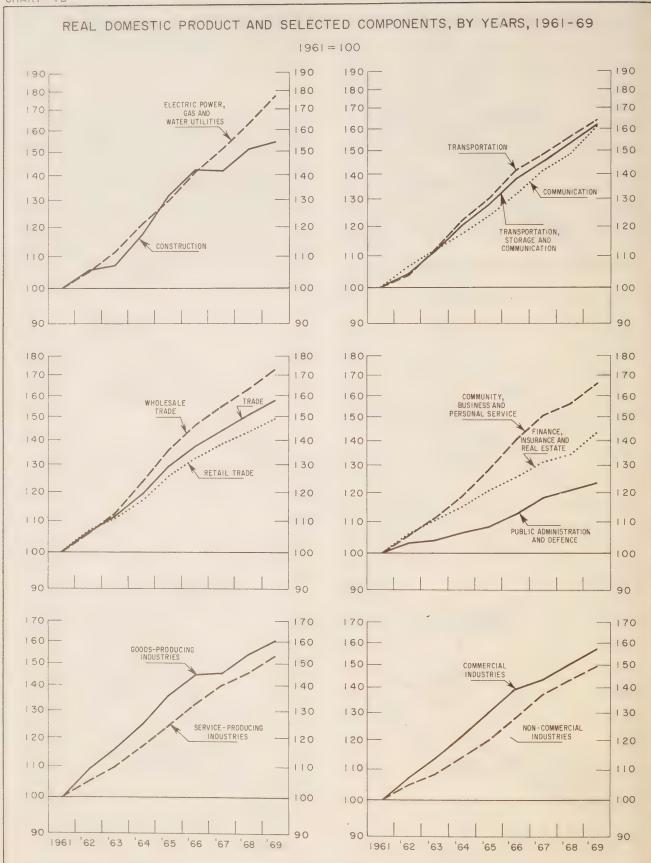

TABLE 1. REAL DOMESTIC PRODUCT BY INDUSTRY, BY YEARS, 1961-69 (1960 S.I.C.) INDEXES: 1961 = 100

INDUSTRY	1961 % WEIGHT	1961	1962	1963	1964	1965	1966	1967	1968	1969
REAL DOMESTIC PRODUCT (S.I.C. 1-11)	100.000	100.0	106.9	112.7	120.4	129.0	138.0	142.4	149.3	156.2

¹ The percentage weights shown in Columns 4 and 8 in this table have been calculated from the value of GDP at far three straining seed in the asards of 1 liars rather than the million dollars shown in Columns 3 and 7.
² For RDP purposes the content of S.I.C. Division 7 has been altered to include only transportation, storage and minute in electric power, eas, water and other utilities are excluded and measured separately.
³ The breakdown by store-type as used in the Merchandising and Services Division was adopted for RDP measures that it is the S.I.C. breakdown.

TABLE 6. Real Domestic Product, Annual Growth Rates: By Industry, 1961-66 and 1961-69

Industry	Annual growth rate		Industry	Annual growth rate	
	1961-66	1961 - 69		1961-66	1961-69
		76		(76
Real Domestic Product	6.6	5.8	Real Domestic Product - Concluded:		
Agriculture	5.6	1.7	Construction industry	7.4	6.1
Forestry	5.7	4.0	Transportation, storage and communication	6.8	6.5
			Transportation	7.4	6.8
Fishing and trapping	2.5	2.0	Storage	4.1	2.7
Fishing	3.1	2.3	Communication	5.5	6.0
Hunting and trapping	- 4.2	- 1.4	Electric power, gas and water utilities	7.2	7.6
Mines (including milling), quarries and oil wells	6.6	5.4	Trade	6.7	6.1
Metal mines	4.8	3.5	Wholesale trade	8.2	7.4
Mineral fuels	8.4	8.4	Retail trade	5.8	5.2
Non-metal mines except coal mines	23.0	19.1	Finance, insurance and real estate	4.6	4.5
Quarries and sand pits	11.4	5.0	Community, business and personal service indus-	7.0	4.0
Manufacturing	8.3	6.8	tries	7.0	6.9
Non-durable manufacturing	6.0	5.1	Education and related services	10.8	10.5
Foods and beverages	5.2	4.7	Health and welfare services	5.3	5.6
Tobacco products industries	4.9	2.4	Motion picture and recreational services	7.1	6.3
Rubber industries	9.6	7.3	Services to business management	7.9	7.2
Leather industries	0.8	- 0.8	Personal services	3.9	3.4
Textile industries	7.4	6.1	Miscellaneous services	9.3	10.4
Knitting mills	5.6	5.0	Public administration and defence	2.2	2.8
Clothing industries	4.2	3.0	Federal administration		0.7
Paper and allied industries	4.8	3.7	Provincial administration	6.2	7.1
Printing, publishing and allied industries	3.7	3.8	Local administration	4.1	3.9
Petroleum and coal products industries	5.0	3.9			0.0
Chemical and chemical products industries	9.8	8.3	Special industry groupings:		
Miscellaneous manufacturing industries	8.7	8.4	aproving an additional and a second a second and a second		
Durable manufacturing	11.1	8.7	Real Domestic Product less agriculture	6.7	6.0
Wood industries	7.3	4.2	Goods-producing industries	7.6	6.0
Furniture and fixture industries	9.6	7.8			
Primary metal industries	8.5	6.3	Goods-producing industries less agriculture	7.8	6.5
Metal fabricating industries(excluding machinery and transportation equipment industries)	11.3	7.8	Service-producing industries	5.8	5.6
Machinery industries (excluding electrical ma- chinery)	13.4	9.7	Commercial industries	6.9	5. 9 6. 1
Transportation equipment industries	14.7	14.0			
Electrical products industries	12.5	9.4	Non-commercial industries	5.0	5.4
Non-metallic mineral products industries	7.5	4.7	Index of Industrial Production	8.0	6.7
